When media coverage of courtroom trials came under intense fire in the aftermath of the infamous New Jersey v. Hauptmann lawsuit (a.k.a. the Lindbergh kidnapping case,) a new wave of fictionalized courtroom programming arose to satiate the public's appetite for legal drama. This book is an alphabetical examination of the nearly 200 shows telecast in the U.S. from 1948 through 2008 involving courtrooms, lawyers and judges, complete with cast and production credits, airdates, detailed synopses and background information. Included are such familiar titles as Perry Mason, Divorce Court, Judge Judy, LA Law, and The Practice, along with such obscure series as They Stand Accused, The Verdict Is Yours Sam Benedict, Trials of O'Brien, and The Law and Mr. Jones. The book includes an introductory overview of law-oriented radio and TV broadcasts from the 1920s to the present, including actual courtroom coverage (or lack of same during those years in which cameras and microphones were forbidden in the courtroom) and historical events within TV's factual and fictional treatment of the legal system. Also included in the introduction is an analysis of the rise and fall of cable's Court TV channel.

The most famous racing drivers drove it, and, for a long time, it was a guaranteed winner for Porsche: Now, finally, the first comprehensive work about the 908 has been published in the English language. The authors portray the fascinating history of the Porsche 908 racing car, and clearly explain its complex technology. Racing history is fully documented, and detailed statistics enable the reader to quickly look up all of the racing data. In addition, there are little-known anecdotes and contemporary reports from eye-witnesses and drivers. A wealth of contemporary, previously unreleased images evoke the fascinating atmosphere and excitement of the great seventies racing era.

IBM Power Systems S922, S914, and S924 Technical Overview and Introduction Aug 10 2020
This IBM® Redpaper™ publication is a comprehensive guide that covers the IBM Power System S922 (9009-22A), IBM Power System S914 (9009-41A), and IBM Power System S924 (9009-42A) servers that support IBM AIX®, IBM i, and Linux operating systems. The objective of this paper is to introduce the major innovative Power S914, Power S922, and Power 924 offerings and their relevant functions: The new IBM POWER9™ processor, which is available at frequencies of 2.3 - 3.8 GHz, 2.8 - 3.8 GHz, 2.9 - 3.8 GHz, 3.4 - 3.9 GHz, 3.5 - 3.9 GHz, and 3.8 - 4.0 GHz. Significantly strengthened cores and larger caches. Two integrated memory controllers that double the memory footprint of IBM POWER8® servers. Integrated I/O subsystem and hot-pluggable Peripheral Component Interconnect Express (PCIe) Gen4 and Gen3 I/O slots. I/O drawer expansion options offer greater flexibility. Support for Coherent Accelerator Processor Interface (CAPI) 2.0. New IBM EnergyScale™ technology offers new variable processor frequency modes that provide a significant performance boost beyond the static nominal frequency. This publication is for professionals

who want to acquire a better understanding of IBM Power Systems™ products. The intended audience includes the following roles: Clients Sales and marketing professionals Technical support professionals IBM Business Partners Independent software vendors (ISVs) This paper expands the current set of IBM Power Systems documentation by providing a desktop reference that offers a detailed technical description of the Power S914, Power S922, and Power S924 systems. This paper does not replace the current marketing materials and configuration tools. It is intended as an extra source of information that, together with existing sources, can be used to enhance your knowledge of IBM server solutions.

As a present-day classic, although challenging to some, low-slung looks and bright colours make the 1970s 914 period-perfect. Combined with near-ideal weight distribution and a low centre of gravity, its mid-engine layout means the 914 can achieve cornering G-forces comparable to the contemporary 911. The 914 was seen as a car that could inject a shot of glamour into VW's slightly worthy and dependable range of air-cooled cars.

Born in the Bohemian town of Maffersdorf on September 3, 1875, Ferdinand Porsche displayed unparalleled automotive engineering genius from his earliest years, designing all-wheel-drive cars by 1900. At the age of just 31, Porsche became the technical director of Austro-Daimler, at the time one of the world's largest automobile manufacturers where Porsche designed some of the world's most iconic cars, like the Mercedes-Benz Kompressor and Typ S models. In 1933, Porsche developed the fabled 16-

cylinder mid-engine Auto Union Grand Prix race car. In 1938 Porsche began development of the Typ 64. Built for long-distance endurance competition, the Typ 64 is considered the forefather of all Porsche race cars. Porsche captures the Porsche story through entries on the most iconic Porsche cars ever built, from the first 356 to the latest 911, to the mid-engine Boxster and Cayman, and all the front-engine cars including the 928, 944, 968 and Cayenne. No other sports car has achieved the success of those built by Porsche, on the street or on the world's racetracks. Part of Motorbooks' First Gear series, Porsche celebrates the German marque's history through lavishly illustrated profiles of the company's ground-breaking sports cars, each one supplemented with spec boxes and "did you know?" factoids.

Steam Railroads of Northern Iowa and Southern Minnesota Feb 02 2020 Steam railroading became an integral part of the communities in northern Iowa and southern Minnesota in the late 1800s. The railroad provided hundreds of jobs and the ability to transport both goods and passengers across the Midwest. The Chicago & North Western Railway, the Chicago Great Western Railroad, the Minneapolis & St. Louis Railway, the Chicago, Rock Island, & Pacific Railroad, and the Chicago, Milwaukee, St. Paul & Pacific Railroad (called the Milwaukee Road by employees) served five principal gateways, which included Chicago, Illinois; Minneapolis-St. Paul, Minnesota; Omaha, Nebraska; and Kansas City and St. Louis, Missouri. Operating steam engines required tremendous manpower, and by the 1920s, some steam passenger trains were replaced by more efficient motor cars, fueled by oil-powered engines. Steam engines could no longer compete with the reduced operating costs, smaller crew requirements, and time savings provided by diesel, which ultimately led to the fall of steam in 1955.

The Enos Gene Mar 29 2022 Did ancient Jews live to be hundreds of years old as the Bible says? Jacob Upjohn, a biblical scholar thought

so and found the evidence: an urn buried for thousands of years that contained the blood of Enos, an ancient Jew who lived more than 900 years. Upjohn, caught up in World War II, lost his life trying to bring the urn to safety in a B-24. Today, Jay Jessey, an aviation archaeologist, has stumbled onto a piece of the same B-24 that crashed in an Iranian desert in 1942. He's on a mission to find the wreckage.

Porsche - The Racing 914s Jul 09 2020 Detailed study of a remarkable little car that, when it appeared in 1969, was considered a mish-mash of ideas, and not a 'proper' Porsche. It's also the story of the 'little' guys ... the privateers and dealer teams who did most of the development that turned the 914 into great little racer.

Drone Strike! Mar 05 2020 The idea of the

armed, combat-configured unmanned aerial vehicle entered the 21st Century in the same manner as the idea of military airplanes had entered the 20th Century. It was an untried and untested concept suddenly thrust into the spotlight in an unexpected global war. By 1999, few people outside the military recognized the potential of armed, unmanned flying vehicles, or Unmanned Combat Air Vehicles (UCAVs), as they were called. Today, UCAVs form a vital arm of U.S. strike forces and are controlled from halfway around the world. In this book, the author picks up the UCAV story where he left off in his 2010 Specialty Press book *Birds of Prey: Predators, Reapers and America's Newest UAVs in Combat*. Since that time, both technology and battlefield doctrine have evolved considerably and this book is a new window into that world. It provides a detailed look inside the present and future of robotic aerial warfare systems and technologies. Yenne's first book on UCAVs covered the period of early development through the end of the 20th Century. *Drone Strike!* takes you from that time through today's latest technical wonders, covering such amazing unmanned aircraft capabilities as aerial refueling and landing aboard aircraft carriers even more accurately than manned aircraft. This book also contains recently declassified photographs of the latest U.S. Unmanned Combat Aerial Vehicles.

Porsche 914 Aug 29 2019 * Special slipcased edition, limited to 314 copies The Porsche 911's little brother...In 1969 a very special sports car was born. The 914 rose from a marriage of convenience of Volkswagen and Porsche, because both companies wanted a small, modern and affordable sports car in their product range, but for little cost. Thus it was decided to combine the skills of both manufacturers. The result was a light mid-engine sports car with a lively road performance and even 50 years after its launch, it pleases the eye with a fresh design. Back then it was often ridiculed as a 'housewife Porsche' or 'Volks-Porsche', but now, the 914 has come out of the shadow of its big brother the 911 and has a huge fan base; today it lives on in the Boxster and Cayman models. This volume includes: the result of thorough research in the Porsche and VW archives; rich photography; all technical data; development, production, model history and racing appearances.
