Militarized Modernity and Gendered Citizenship in South Korea

Oct 08 2020 This pathbreaking study presents a feminist analysis of the politics of membership in the South Korean nation over the past four decades. Seungsook Moon examines the ambitious effort by which South Korea transformed itself into a modern industrial and militarized nation. She demonstrates that the pursuit of modernity in South Korea involved the construction of the anticommunist national identity and a massive effort to mold the populace into useful, docile members of the state. This process, which she terms "militarized modernity," treated men and women differently. Men were mobilized for mandatory military service and then, as conscripts, utilized as workers and researchers in the industrializing economy. Women were consigned to lesser factory jobs, and their roles as members of the modern nation were defined largely in terms of biological reproduction and household management. Moon situates militarized modernity in the historical context of colonialism and nationalism in the twentieth century. She follows the course of militarized modernity in South Korea from its development in the early 1960s through its peak in the 1970s and its decline after rule by military dictatorship ceased in 1987. She highlights the crucial role of the Cold War in South Korea's militarization and the continuities in the disciplinary tactics used by the Japanese colonial rulers and the postcolonial military regimes. Moon reveals how, in the years since 1987, various social movements—particularly the women's and labor movements—began the still-ongoing process of revitalizing South Korean civil society and forging citizenship as a new form of membership in the democratizing nation.

The Oxford Handbook of Industrial Policy Nov 28 2019 Industrial policy has long been regarded as a strategy to encourage sector-, industry-, or economy-wide development by the state. It has been central to competitiveness, catching up, and structural change in both advanced and developing countries. It has also been one of the most contested perspectives, reflecting ideologically inflected debates and shifts in prevailing ideas. There has lately been a renewed interest in industrial policy in academic circles and international policy dialogues, prompted by the weak outcomes of policies pursued by many developing countries under the direction of the Washington Consensus (and its descendants), the slow economic recovery of many advanced economies after the 2008 global financial crisis, and mounting anxieties about the national consequences of globalization. The Oxford Handbook of Industrial Policy presents a comprehensive review of and a novel approach to the conceptual and theoretical foundations of

industrial policy. The Handbook also presents analytical perspectives on how industrial policy connects to broader issues of development strategy, macro-economic policies, infrastructure development, human capital, and political economy. By combining historical and theoretical perspectives, and integrating conceptual issues with empirical evidence drawn from advanced, emerging, and developing countries, The Handbook offers valuable lessons and policy insights to policymakers, practitioners and researchers on developing productive transformation, technological capabilities, and international competitiveness. It addresses pressing issues including climate change, the gendered dimensions of industrial policy, global governance, and technical change. Written by leading international thinkers on the subject, the volume pulls together different perspectives and schools of thought from neo-classical to structuralist development economists to discuss and highlight the adaptation of industrial policy in an ever-changing socio-economic and political landscape.
