Perspectives and Implications for the Development of Information Infrastructures Jul 21 2021 In the same way that infrastructures such as transportation, electricity, sewage, and

water supply are widely assumed to be integrators of urban spaces, information infrastructures are assumed to be integrators of information spaces. With the advent of Web 2.0 and new types of information infrastructures such as online social networks and smart mobile platforms, a more in-depth understanding of the various rights to access, use, develop, and modify information infrastructure resources is necessary. Perspectives and Implications for the Development of Information Infrastructures aims at addressing this need by offering a fresh new perspective on information infrastructure development. It achieves this by drawing on and adapting theory that was initially developed to study natural resource commons arrangements such as inshore fisheries, forests, irrigation systems, and pastures, while placing great emphasis on the complex problems and social dilemmas that often arise in the negotiations.

Soil Fertility Decline in the Tropics Dec 02 2019 Wide coverage of soils and perennial cropping systems in the tropics Synthesis of decades of research Challenges assumptions on the benefits of plantations for soil fertility It is generally assumed that soil fertility decline is widespread in the tropics and that this is largely associated with annual cropping and subsistence farming. In contrast, perennial plant cover (as in plantation agriculture) provides better protection for the soil. This book reviews these concepts, focusing on soil chemical changes under different land-use systems in the tropics. These include perennial crops, annual crops and forest plantations. Two case studies, on sisal plantations in Tanzania and sugar cane in Papua New Guinea, are presented for detailed analysis. The author demonstrates that soil fertility decline is also a problem on plantations.

Doing a Literature Review Jun 07 2020 ‘This book can provide an excellent framework for bolstering what is often an experiential process - doing a literature review. It is best seen alongside the supervisor, as a guide, through the multidimensional sea of academic literature’ - British Educational Research Journal
Reviewing the literature for a research project can seem a daunting, even overwhelming task. New researchers, in particular, wonder: Where do I start? What do I do? How do I do it? This text offers students across the social sciences and humanities a practical and comprehensive guide to writing a literature review. Chris Hart offers invaluable advice on how to: search out existing knowledge on a topic; analyse arguments and ideas; map ideas, arguments and perspectives; produce a literature review;

and construct a case for investigating a topic. Doing a Literature Review contains examples of how to cite references, structure a research proposal and present a Master's thesis. It is published as a Set Book for The Open University Postgraduate Foundation Module (D820) The Challenge of the Social Sciences. `I have been waiting for this book for five years. It sets out a number of important dimensions involved in the process of literature review and by clear signposting, diagrams, and examples will help the student to carry out her or his review more systematically. Learning how to carry out a literature review has always entailed the experiential. While this is the best way of learning, it is only so providing that learning actually takes place during the experience (or by reflection afterwards). This book makes explicit those dimensions which could remain implicit or even missed by the student as they wade through all those books, papers, articles, and print-outs' - Kevin Maguire, Nottingham Trent University

A Review of the Ocean Research Priorities Plan and Implementation Strategy Jan 27

2022 Ocean research offers countless benefits, from improving fisheries management to discovering new drugs to enabling early detection of tsunamis and hurricanes. At the request of the Joint Subcommittee on Ocean Science and Technology (JSOST), the National Research Council convened a committee to review the draft and final versions of the Ocean Research Priorities Plan and Implementation Strategy described in *Charting the Course for Ocean Science in the United States: Research Priorities for the Next Decade*, which represents the first coordinated national ocean research planning effort involving all federal agencies that support ocean science. The plan presents an ambitious vision for ocean research that will be of great benefit to the ocean sciences community and the nation. This book contains both sets of findings (i.e., the committee's review of the JSOST's draft plan [A Review of the Draft Ocean Research Priorities Plan: Charting the Course for Ocean Science in the United States] and the review of the final plan). This book recommends that JSOST employ a variety of outreach mechanisms to continue to engage nonfederal partners in ocean research planning efforts, such as establishing external committees to provide scientific and technical advice and to review progress on implementation of the research plan.

Metal-Reinforced Ceramics Oct 31 2019 Metal-Reinforced Ceramics covers the principle of metal-fiber-reinforced ceramics, a well-known topic in the field of reinforced concrete. Much of the work that has been done has remained unpublished, hidden in industrial company archives due to the commercial sensitivity associated with the respective technologies that prevailed at the time, which no longer applies today. This book will discuss advanced technologies that have largely been undocumented before in a broad range of industrial application areas, with updates on alumina, silicon carbide, boron carbide, tungsten carbide, fused silica, and carbon-based ceramics which are hard, heat resistant, wear resistant, and chemically durable. Provides detailed information on fundamental principles, advanced processing technologies and industrial applications Features comprehensive industrial knowledge not usually in the public domain from the author's

experience spanning more than three decades Features armor ceramics, bioceramics, aerospace, mining and architectural ceramic applications

Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals Feb 13 2021

To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during

Briggs' Information Processing Model of the Binary Classification Task Dec 14 2020

First published in 1983. Routledge is an imprint of Taylor & Francis, an informa company. This monograph is a review of the evolution of George Briggs' informationprocessing model from a general schema beginning with the work of Saul Sternberg (1969a) and Edward E. Smith (1968) to a fairly well-detailed schematic representation of central processes that Briggs was working on at the time of his early death. The development of Briggs' model of the binary classification task (BCT) spanned the period from 1969 when he published his first report on choice reaction time with Blaha (Briggs & Blaha, 1969) to 1977 with the publication of a posthumous paper (Briggs, Thomason, & Hagman, 1978). The model evolved across a total of 16 experimental and 2 review papers.

Performance Evaluation of Computer and Communication Systems Jul 29 2019 Performance evaluation is a critical stage of software- and hardware-system development that every computer engineer and scientist should master. Although complex - requiring skills in mathematics, measurement techniques

and simulation – performance evaluation is primarily an art; indeed, the most difficult stage in a performance analysis is defining the approach: once you know what to do, it is less difficult to define a plan of attack with your familiar software tools. We present a set of topics, which we believe should be part of every engineer's intellectual toolkit. This includes the statistical exploitation of numerical results in an efficient and ethical way, for example: how to summarize variability or fairness; what transient removal in a simulation is; and how to make predictions from a time series. We also present well-known performance patterns, which helps to quickly bring the engineer to the main issues. For queuing theory, we focus on a subset of very useful results, such as operational laws. A highlight of the book is the

development of Palm calculus, also called –the importance of the viewpoint, – which is central to queuing theory. Indeed, this topic has so many applications to simulation and to system analysis in general that it is a very good time investment. This book began as a set of lecture notes for a course given at EPFL.
