The Case Against Homework Jan 22 2022 Does assigning fifty math problems accomplish any more than assigning five? Is memorizing word lists the best way to increase

vocabulary—especially when it takes away from reading time? And what is the real purpose behind those devilish dioramas? The time our children spend doing homework has skyrocketed in recent years. Parents spend countless hours cajoling their kids to complete such assignments—often without considering whether or not they serve any worthwhile purpose. Even many teachers are in the dark: Only one of the hundreds the authors interviewed and surveyed had ever taken a course specifically on homework during training. The truth, according to Sara Bennett and Nancy Kalish, is that there is almost no evidence that homework helps elementary school students achieve academic success and little evidence that it helps older students. Yet the nightly burden

taking a serious toll on America's families. It robs children of the sleep, play, and exercise time they need for proper physical, emotional, and neurological development. And it is a hidden cause of the childhood obesity epidemic, creating a nation of "homework potatoes." In *The Case Against Homework*, Bennett and Kalish draw on academic research, interviews with educators, parents, and kids, and their own experience as parents and successful homework reformers to offer detailed advice to frustrated parents. You'll find out which assignments advance learning and which are time-wasters, how to set priorities when your child comes home with an overstuffed backpack, how to talk and write to teachers and school administrators in persuasive, nonconfrontational ways, and how to rally other parents to help restore balance in your children's lives. Empowering, practical, and rigorously researched, *The Case Against Homework* shows how too much work is having a negative effect on our children's achievement and development and gives us the tools and tactics we need to advocate for change. Also available as an eBook *Grading for Equity* Sep 29 2022 "Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved, equity-focused grading for impact." --Zaretta Hammond, Author of *Culturally Responsive Teaching & The Brain Crack* open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today's schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With *Grading for Equity*, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a leveler for all.

creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, *Grading for Equity* provides a critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a “fixed mindset” about students’ academic potential—practices that are still in place a century later. A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a “true north” orientation toward equitable grading practices. Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness. Reflection tools for facilitating individual or group engagement and understanding. As Joe writes, “Grading practices are a mirror not just for students, but for us as their teachers.” Each one of us should start by asking, “What do my grading practices say about who I am and what I believe?” Then, let’s make the choice to do things differently . . . with *Grading for Equity* as a dog-eared reference.

represent current areas of interest in Educational Psychology embedded within current challenges that teachers face in today's elementary grade classrooms. The cases are organized into six major parts: Human Development, Individual Differences and Diversity, Learning Theories, Motivation, Classroom Management, Instructional Approaches, and Assessment and Evaluation. Each case describes a detailed teaching scenario written from either the student or the teachers' perspective. To engage students in critical thinking, perspective-taking, analysis, problem solving and decision-making, the cases have been intentionally written without a conclusion. Because the cases are open-ended, it allows the professor or instructor more flexibility and autonomy in how they use the cases. Each case is followed by thought-provoking questions, highlighting the significant issues in the case, from which to analyze the case and apply various theoretical viewpoints. While the cases do not replace actual classroom experience, they present a way to immerse students in the classroom's culture by providing them with real-life teaching examples.

[EBOOK: Homework for Learning: 300 Practical Strategies](#) Apr 24

2022 Are you looking for new and creative ways of engaging and motivating your learners? If so, then this is the essential resource for you! Homework for Learning takes a unique approach to homework arguing that it is more than a finishing-off activity and should be inextricably linked to the teaching and learning that takes place in the classroom. Homework - when imaginatively and considerately deployed - can be carried out anywhere, not just within the home, and can promote independent learning; assist in the development of generic skills; and free up time for further work on the curriculum. The authors present over 300 practical strategies for homework to motivate and energize learners. These ideas draw on expert practice and are underpinned by a range of educational theories on learning. The accessible ideas include: Strategies to ensure high homework completion rates Homework for creative starter activities Ideas for fun and effective exam preparation Technologically innovative and e-learning strategies Coursework and project preparation Marking and assessment strategies Off-site homework activities to support school trips and visits Whether you are training to teach in mainstream or post-compulsory education, or are a more experienced teacher, this book encourages you to experiment with a variety of novel strategies for homework. "Homework for Learning is an important read for both new and experienced teachers looking for inspiration. Written in an engaging and highly accessible manner the authors offer a persuasive and powerful argument as to why teachers need to consider the transformative potential of homework."

outside of the classroom. The practical strategies offered are underpinned by grounded evidence and a research base which encourages us to rethink our homework practices. The emphasis upon 'looking back and looking forwards', supported by critical reflective practice, action research and ongoing professional development is timely. This will be a 'must read' text in my institution." Julie Hughes, Head of Department (Post Compulsory Education), University of Wolverhampton, UK "Within the first few pages Gerry and Warren's book captured my interest. Firstly they openly talk about the problems around homework, something I could fully empathise with. Then they discuss how homework can be used more creatively to support independent learning and learning that involves others in the process. This is not only a very practical book with extensive guidance on good practice for teachers, it also draws on literature that challenges some of our pre-conceptions about what homework should 'look like'. Through a series of activity sheets, suggestions, thinking points and professional development ideas, the authors challenge teachers to think more carefully about the reasons for setting homework, what they are trying to achieve from it and how they might best support students. What is more, this book is stuffed full of fun ideas for homework that represent innovative approaches likely to engage the interest of students and move beyond the traditional essay (although this is also included). Not only will these suggestions improve the experiences of students, it will also be much more fun for teachers in giving and utilising the homework set." Dr Linda Hammersley-Fletcher, Manchester Metropolitan University, UK "This is a really useful book. Written in a clear style, Gerry Czerniawski and Warren Kidd draw on a wealth of classroom experience and research to share some powerful ideas about learning and teaching. For this book is not just about homework but about how to teach so that children learn. It has heaps of tips and strategies underpinned by big educational ideas that will really excite all sorts of teachers."

Teaching Epidemiology May 02 2020 Teaching epidemiology requires skill and knowledge, combined with a clear teaching strategy and good pedagogic skills. The general advice is simple: if you are not an expert on a topic, try to enrich your background knowledge before you start teaching. Teaching Epidemiology, third edition helps you to do this, and by providing the world-expert teacher's advice on how best to structure teaching gives a unique insight in to what has worked in their hands. The book will help you plan your own tailored teaching program. The book is a guide to new teachers in the field at two levels; those teaching basic courses for undergraduates, and those teaching more advanced courses for students at postgraduate level. Each chapter provides key concepts and a list of key references. Subject specific methodology and disease specific issues (from cancer to genetic epidemiology) are dealt with in details. There is also a focused chapter on the principles and practice of computer-assisted learning.
