Is-42 Oct 04 2022 Social media is a new technology that not only allows for another channel of broadcasting messages to the public, but also allows for two way communication between emergency managers and major stakeholder groups. Increasingly the public is turning to social media technologies to obtain up to date information during emergencies and to share data about the disaster in the form of geo data, text, pictures, video, or a combination of these media. Social media also can allow for greater situational awareness for emergency responders. While social media allows for many opportunities to engage in an effective conversation with stakeholders, it also holds many challenges for emergency managers. The purpose of this course is to provide the participants with best practices including tools, techniques and a basic roadmap to build capabilities in the use of social media technologies in their own emergency management organizations (State, local, Tribal) in order to further their emergency response missions. By the end of this course, participants will be able to: Explain why social media is important for emergency management Describe the major functions and features of common social media sites currently used in emergency management Describe the opportunities and challenges of using social media applications during the 5 phases of emergency management Describe better practices for using social media applications during the 5 phases of emergency management Describe the process for building the capabilities and to sustain the use of social media in an emergency management organization (State, local, tribal, territorial)"

Music in The Girl's Own Paper: An Annotated Catalogue, 1880-1910 Aug 10 2020 Nineteenth-century British periodicals for girls and women offer a wealth of material to understand how girls and women fit into their social and cultural worlds, of which music making was an important part. The Girl's Own Paper, first published in 1880, stands out because of its rich musical content. Keeping practical usefulness as a research tool and as a guide to further reading in mind, Judith Barger has catalogued the musical content found in the weekly and later monthly issues during the magazine's first thirty years, in music scores, instalments of serialized fiction about musicians, music-related nonfiction, poetry with a musical title or theme, illustrations depicting music making and replies to musical correspondents. The book's introductory chapter reveals how content in The Girl's Own Paper changed over time to reflect a shift in women's music making from a female accomplishment to an increasingly professional role within the discipline, using 'the piano girl' as a case study. A comparison with musical content found in The Boy's Own Paper over the same time span offers additional insight into musical content chosen for the girls' magazine. A user's guide precedes the chronological annotated catalogue; the indexes that follow reveal the magazine's diversity of approach to the subject of music.

The Quirks & Quarks Guide to Space Jul 01 2022 For everyone who's curious about what's new under (and over and around) the stars. Douglas Adams famously pronounced in The Hitchhiker's Guide to the Galaxy that the answer to life, the universe, and everything was 42. Quirks & Quarks, whose approach to science owes almost as much to Adams as it does to Newton or Einstein or Hawking, have flipped that notion through a gap in the space-time continuum (or something like that) and come up with answers to the 42 essential questions about space. Much about the universe is very hard for most of us to grasp, and if anyone can explain these mind-bending aspects of the heavens above, it's the Quirks & Quarks producers, who have been bringing Canadians understandable science, with trademark humour, for more than thirty years. In their Guide to Space, they answer such pressing questions as Where does space begin? Why is most of the universe missing? Is there intelligent life in the universe? And the real puzzler: What came before the Big Bang? They also answer questions we wish we'd thought to ask, such as Can you surf a gravity wave? and Why is the universe's temperature on my TV? There are answers as well to far more practical questions, like What happens when you fall into a black hole? and How will the universe end? The answers, which have been vetted by a team of astronomers, are witty, authoritative, in-depth, accurate, up-to-date astronomically, and, of course, quirky.
