Brain Power Enrichment: Level Two, Book One-teacher Version Grades 6-8 Oct 04 2020 Brain Power Enrichment Programs aim to develop problem-solving abilities in students who wish to improve their skills. Additionally, the programs may provide challenging, stimulating and inspirational learning experiences through engagement with math and logic problem solving for gifted children. The Student Version book accompanies a Level Two student through his/her first semester of the problem solving program (or it may be used independently as a problem solving workbook). However, this Teacher Version may be used by a teacher or tutor as it has, in addition to the content of the Student Version, short instructions for each lesson as well as answers to problems. All Brain Power programs are based on a step-by-step approach, which enables students to understand problems of increasing complexity. Level Two continues to equip students typically in grades 6 to 8 with problem solving strategies and techniques and supports the application of these skills to algebra and geometry. The implications for improving one's problem solving skills are numerous. These include a more positive attitude toward math and science, improved thinking flexibility and creativity in all subject areas, as well as increased success in academic, gifted, university admissions, and professional program tests (many of which are designed with an emphasis on assessing higher-order thinking skills). Moreover, knowledge of a range of problem solving strategies, coupled with experience in their application, have benefits which transcend the classroom and enter the realm of professional, social and intellectual accomplishment.

Arabian Plate and Surroundings: Geology, Sedimentary Basins and Georesources Aug 22 2019 This book focuses on the evolution of sedimentary basins of the Arabian Plate and its surroundings. Because these sedimentary basins developed in various tectonic settings, from extensional or transtensional to flexural, transpressional or compressional, their sedimentary sequences provide unique records of the regional geology. Georesources of the Arabian Plate are also described here, including petroleum potential, reservoirs, water resources, fresh water and deep saline aquifers, as well as materials and ore deposits. The book is made by a set of papers authored by geoscientists working in both academia and industry. Numerous chapters describe some regional important geologic features and selected sedimentary basins from the Middle East, North Africa and the Arabian Peninsula domains. Other chapters focus on georesources. A particular focus is given to the geology of Saudi Arabia. This book is an important contribution to the geology of the Arabian Peninsula and its surroundings. In view of the strategic and economic importance of the regional geology and georesources of the Arabian Plate and Surroundings, this volume will constitute an important reference for a wide range of geoscientists interested in the geology of this region, especially those active in petroleum geosciences and related industry. Ultimately, readers will discover important thematic maps in this book.

Pediatric Neurology Part I Jun 12 2021 "Psychomotor" development refers to changes in a child's cognitive, emotional, motor, and social capacities from the beginning of life throughout fetal and neonatal periods, infancy, childhood, and adolescence. It occurs in a variety of domains and a wide range of theories makes understanding children's development a challenging undertaking. Different models have tried to interpret the origins of human behavior, the pattern of developmental changes over time, and the individual and contextual factors that could direct child development. No single theory has been able to account for all aspects of child development, but each of them may contribute an important piece to the child development puzzle. Although theories sometimes disagree, much of their information is complementary rather than contradictory. The knowledge of child typical development and related theories and models is greatly useful for clinical practice, leading to recognition of developmental disorders and the ways in which they can be approached and treated. In this chapter, traditional and more modern concepts around functional development of psychomotor abilities are reported, firstly more in general and then specifically in the motor domain.

Research Handbook on Street-Level Bureaucracy Sep 15 2021 When the objectives of public policy programmes have been formulated and decided upon, implementation seems just a matter of following instructions. However, it is underway to the realization of those objectives that public policies get their final substance and form. Crucial is what happens in and around the encounter between public officials and individual citizens at the street level of government bureaucracy. This Research Handbook addresses the state of the art while providing a systematic exploration of the theoretical and methodological issues apparent in the study of street-level bureaucracy and how to deal with them.

Gamification in Moodle: Lehre im nächsten Level May 11 2021 Erstmalig wurde auf der Moodle Plattform der Virtuellen Pädagogischen Hochschule ein gamifizierter Online LehrerInnenfortbildungskurs zu Additive Manufacturing/Rapid Prototyping (3D Druck) angeboten. In diesem Kurs wurden die Erfahrung sowie das Feedback der Teilnehmenden verwendet, um eine neue Lehr- und Lernmethode, Digital Game Enhanced Learning, zu entwickeln. In diesem Ansatz werden die Vorteile von Gamification mit den Vorzügen der humanistischen Pädagogik und/oder dem Konstruktivismus verbunden. Nach der Fragestellung: "Wie erfahren Lehrende Gamification mit eLearning?" wurde die Arbeit als ein Fallbeispiel aufgebaut. Die Entwicklung des LehrerInnenkurses erfolgte in einem partizipativen Action Research. Die Auswertung erfolgte qualitativ sowie quantitativ, wobei das Hauptaugenmerk auf die qualitativen Daten gelegt wurde. Angenommen wurde eine Veränderung des Lernens der Teilnehmenden durch die Methode Gamification sowie positive Erfahrungen der LehrerInnen durch das Entdecken der Methode Gamification in ihrer freiwilligen Weiterbildung. Die technischen Aspekte der Lernplattform Moodle wurden auf ihre Möglichkeiten für den Einsatz von gamifizierten Strategien getestet und analysiert. Die Arbeit kommt zu dem Schluss, dass Lehrende das Lernen mit Gamification in einer Online Umgebung positiv wahrnehmen und bewerten sowie für ihren Unterricht reflektieren und einen Transfer des Gelernten in die eigene Realität antreten. Die technische Eignung von Moodle für den Einsatz gamifizierter Ansätze ist mit Abstrichen in der Automation ausreichend gegeben.

Creating Value with Big Data Analytics Jul 01 2020 Our newly digital world is generating an almost unimaginable amount of data about all of us. Such a vast amount of data is useless without plans and strategies that are designed to cope with its size and complexity, and which enable organisations to leverage the information to create value. This book is a refreshingly practical, yet theoretically sound roadmap to leveraging big data and analytics. Creating Value with Big Data Analytics provides a nuanced view of big data development, arguing that big data in itself is not a revolution but an evolution of the increasing availability of data that has been observed in recent times. Building on the authors' extensive academic and practical knowledge, this book aims to provide managers and analysts with strategic directions and practical analytical solutions on how to create value from existing and new big data. By tying data and analytics to specific goals and processes for implementation, this is a much-needed book that will be essential reading for students and specialists of data analytics, marketing research, and customer relationship management.
