**Forms of Mathematical Knowledge** Jul 21 2021 What mathematics is entailed in knowing to act in a moment? Is tacit, rhetorical knowledge significant in mathematics education? What is the role of intuitive models in understanding, learning and teaching mathematics? Are there differences between elementary and advanced mathematical thinking? Why can't students prove? What are the characteristics of teachers' ways of knowing? This book focuses on various types of knowledge that are significant for learning and teaching mathematics. The first part defines, discusses and contrasts psychological, philosophical and didactical issues related to various types of knowledge involved in the learning of mathematics. The second part describes ideas about forms of mathematical knowledge that are important for teachers to know and ways of implementing such ideas in preservice and in-service education. The chapters provide a wide overview of current thinking about mathematics learning and teaching which is of interest for researchers in mathematics education and mathematics educators. Topics covered include the role of intuition in mathematics learning and teaching, the growth from elementary to advanced mathematical thinking, the significance of genres and rhetoric for the learning of mathematics and the characterization of teachers' ways of knowing.

**The Influence of Aural Training in Music on the Perceptive Performance of Adult Learners' Sound-Discrimination Abilities in an Unknown Foreign Language** Dec 14 2020 Can aural training in music enhance your sound-discrimination abilities for languages? The study sets off to answer this question by testing 50 German-speaking students of non-linguistic degrees for their abilities to discriminate between sounds in Finnish, a language previously entirely unknown to them. 25 randomly selected subjects then went through an aural training in music for two weeks before all the subjects were retested in their aural-perceptive abilities in the Finnish language by means of a similar test

containing different test items. The hypothesised positive effect of the musical intervention could be partially proved by a statistically significant mean enhancement in the final scores achieved by the trained group compared to an insignificant enhancement achieved by the control group.
