Image-Guided Stereotactic Radiosurgery Sep 30 2022 This book provides the reader with a detailed update on the use of stereotactic radiosurgery (SRS) in patients with lesions of the brain and other parts of the body. The aim is not simply to explain the application of SRS and document its value with reference to the author's own clinical experiences and other published evidence, but also to contextualize the technology within a new strategic concept of cancer care. When embedded within an appropriate conceptual framework, technology becomes pivotal in changing therapeutic strategies. A new paradigm that is increasingly impacting on clinical practice is the oligometastatic state, on the basis that long-term survival might be achieved in patients with a low volume and number of metastatic lesions. This book accordingly addresses the value of SRS in patients with oligometastases of solid tumors to the brain, lung, spine, and liver. In addition, it examines the use of SRS in patients with diverse brain lesions, early-stage stage lung cancer, liver cancer, and early-stage prostate cancer. Readers will be persuaded that SRS, using cutting-edge imaging technologies to deliver precisely targeted radiation therapy, represents an exciting non-invasive procedure that holds great promise for the present and the future of cancer care.

100 Activities for Teaching Research Methods Sep 06 2020 A sourcebook of exercises, games, scenarios and role plays, this practical, user-friendly guide provides a complete and valuable resource for research methods tutors, teachers and lecturers. Developed to complement and enhance existing course materials, the 100 ready-to-use activities encourage innovative and engaging classroom practice in seven areas: finding and using sources of information planning a research project conducting research using and analyzing data disseminating results acting ethically developing deeper research skills. Each of the activities is divided into a section on tutor notes and student handouts. Tutor notes contain clear guidance about the purpose, level and type of activity, along with a range of discussion notes that signpost key issues and research insights. Important terms, related activities and further reading suggestions are also included. Not only does the A4 format make the student handouts easy to photocopy, they are also available to download and print directly from the book's companion website for easy distribution in class.

Image-guided Radiation Therapy Feb 09 2021 Image Guided Radiation Therapy (IGRT) is a true revolution in the field of radiation oncology. IGRT provides the unprecedented means of conforming doses to the shape of the target tissues in 3-dimensions reducing the risk of complications thereby improving the quality of life of irradiated patients. Moreover, IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients. Despite its established benefits, several barriers exist to the widespread clinical implementation of IGRT. In the past, great concerns existed regarding the large capital outlay needed for both software and hardware. This barrier is less relevant today given the increased reimbursements possible with IGRT. Today, the most significant barrier is education. IGRT is a fundamentally new approach to both treatment planning and delivery. Adoption of the IGRT approach entails new ways of thinking in regard to patient selection, treatment planning and quality assurance measures. Unfortunately, apart from a few University-based short courses, limited resources are available for the physician and physicist interested in learning IGRT.

Guided Evolution of Society Nov 20 2021 Based on a comprehensive review of human and societal evolution the book develops an approach to conscious, self-guided evolution. In the course of the evolutionary journey of our species, there have been three seminal events. The first happened some seven million years ago, when our humanoid ancestors entered on the evolutionary scene. Their journey toward the second crucial event lasted over six million years when - as the greatest event of our evolutionary history - homo sapiens sapiens, started the revolutionary process of cultural evolution. Today, we have arrived at the threshold of the third major event, 'the revolution of conscious evolution,' when it becomes our responsibility to enter into the evolutionary design space and guide the evolutionary journey of our species. The book tells the story of the first six million years of the journey in just enough detail to understand how evolution had worked in times when it was primarily biological, driven by natural selection. With the human revolution some fifty thousand years ago, with the emergence of self-reflective consciousness, the evolutionary process transformed from biological into cultural. From this point on, the book follows the journey with detailed attention, in order to learn how cultural evolution works. The book is organized in three parts. Part One commences with an exposition of a brief history of the evolutionary idea through time with a focus on a review of the science of general evolution and specifically social and societal evolution. Next, the book unfolds the 'evolutionary story' of our species from the time when the first humanoids entered the evolutionary scene to our current era. Part Two develops a systems view of evolution, explores the ways and means of how evolution works, characterizes evolutionary consciousness and develops the idea of conscious evolution. Part Three builds upon the knowledge developed in the first two parts and sets forth the key conditions of conscious, self-guided evolution, elaborating the core condition, which is the acquisition of evolutionary competence through evolutionary learning. The focus of this part is on an approach to the design of evolutionary guidance systems that our families, neighborhoods, communities, organizations, social and societal systems can use to design the future they aspire to attain. The work is set aside from other statements in three important ways. It provides: (1) a comprehensive review of how evolution has worked with a focus on socio-cultural evolution, (2) an explanation of evolutionary consciousness and the conditions of engaging in conscious evolution, and (3) most significantly, it develops a detailed approach and a methodology to the design of evolutionary guidance systems.

Guided Care Apr 25 2022 Winner of the 2009 Medical Economics Award! "Boult and his colleagues . . . have crafted a team model that builds upon the unique strengths of nurses and primary care physicians coupled with effective communication and implementation of evidence-based care. This represents a great advance over business as usual." --David B. Reuben, MD Director, Multicampus Program in Geriatric Medicine and Gerontology Chief, Division of Geriatrics David Geffen School of Medicine at UCLA Guided Care is an exciting, new team model used to provide medical care to clients with chronic conditions. This model involves adding a Guided Care nurse to the primary care practice team. It is also the most efficient, cost-effective way to respond to the needs of patients. This book provides physicians, nurses, administrators, and leaders of health care organizations with step-by-step guidance on adopting Guided Care Nursing into their practice. Featured Highlights: Evaluating the primary care practice's readiness to adopt Guided Care Preparing for adoption Integrating Guided Care into existing practices Hiring nurses for the primary care team Assuring financial viability Comparing Guided Care with other models The future of primary care, and the quality of care for adults with chronic conditions, depends on finding approaches to improve efficiency and effectiveness. This book demonstrates that Guided Care yields the best outcomes for patients and for primary care at large.

Guided Math in Action Jul 17 2021 Teachers, coaches, and supervisors will learn how to help elementary school students build mathematical proficiency with standards-based, differentiated, small-group instruction with the strategies in this book. Both novice and veteran educators will gain in-depth knowledge for conducting effective guided math lessons, scaffolding learning in small groups, and assessing student learning. Lots of actual templates, graphic organizers, black-line masters, detailed lesson plans, and student work samples are included, as well as vignettes of mini-lessons, center time, small guided math groups, and share time. This practical, hands-on guide will help you... Understand the framework of Guided Math lessons Gain an in-depth look at the role of assessment throughout the Guided Math process Develop an action plan to get started immediately This is a must-have resource for all educators looking for a structure to teach small groups in math that meet the Common Core State Standards for Mathematics.

Improving Functional Outcomes in Physical Rehabilitation Apr 13 2021 Here is a practical, step-by-step guide to understanding the treatment process and selecting the most appropriate intervention for your patient. Superbly illustrated, in-depth coverage shows you how to identify functional deficits, determine what treatments are appropriate, and then to implement them to achieve the best functional outcome for your patients.

Nordic Perspectives on Nature-based Tourism Mar 25 2022 Nature-based tourism (NBT) is a sector where entrepreneurial success is highly knowledge driven. This insightful book offers a comprehensive evaluation of NBT in a Nordic context, highlighting how long-established Nordic traditions of outdoor recreation practices can reveal lessons for the field more broadly. Chapters explore Nordic and international perspectives, local communities, market dynamics, firms, creativity, innovations and value-added experience products.

16th International Conference on Information Technology-New Generations (ITNG 2019) Sep 26 2019 This 16th International Conference on Information Technology - New Generations (ITNG), continues an annual event focusing on state of the art technologies pertaining to digital information and communications. The applications of advanced information technology to such domains as astronomy, biology, education, geosciences, security and health care are among topics of relevance to ITNG. Visionary ideas, theoretical and experimental results, as well as prototypes, designs, and tools that help the information readily flow to the user are of special interest. Machine Learning, Robotics, High Performance Computing, and Innovative Methods of Computing are examples of related topics. The conference features keynote speakers, the best student award, poster award, service award, a technical open panel, and workshops/exhibits from industry, government and academia.

Cultural-Historical Approaches to Studying Learning and Development Dec 30 2019 This collection of papers examines key ideas in cultural-historical approaches to children's learning and development and the cultural and institutional conditions in which they occur. The collection is given coherence by a focus on the intellectual contributions made by Professor Mariane Hedegaard to understandings of children's learning through the prism of the interplay of society, institution and person. She has significantly shaped the field through her scholarly consideration of foundational concepts and her creative attention to the fields of activity she studies. The book brings together examples of how these concepts have been employed and developed in a study of learning and development. The collection allows the contributing scholars to reveal their reactions to Hedegaard's contributions in discussions of their own work in the field of children's learning and the conditions in which it occurs.

Nature Guided Therapy Sep 18 2021 Beginning with an evolutionary history of the relationship between man and his environment, Nature-Guided Therapy takes us on a cross-cultural journey into traditional healing disciplines, such as ethno-medicine, sociobiology, and anthropology. By examining clinical data, empirical scientific investigations, and anecdotal accounts, Dr. George Burns helps point the way to healing benefits of a balanced relationship with the environment. Case histories and step by step procedures for utilizing nature-guided strategies are also presented. Designed as an immensely practical guide for clinicians, this volume contains over 80 therapeutic

exercises and a variety of nature-based strategies to help augment clinical skills regardless of one's theoretical orientation. Also included is the author's Sensual Awareness Inventory to help access the client's experiences that may facilitate relaxation, happiness, and wellness. This book provides a fascinating read that can expand our views, challenge our therapeutic paradigms, broaden our clinical practice, and provide simple yet pragmatic treatment interventions.
