Inspection and Monitoring Techniques for Bridges and Civil Structures Oct 20 2020 The safety, maintenance and repair of bridges and buildings depend on effective inspection and monitoring techniques. These methods need to be able to detect problems often hidden within structures before they become serious. This important collection reviews key techniques and their applications to bridges, buildings and other civil structures. The first group of chapters reviews inspection techniques in concrete components. Given their continuing importance and vulnerability to decay, the next series of chapters describes ways of testing wood components within civil structures. A final group of chapters looks at visual inspection techniques used to assess bridges in particular. Inspection and monitoring techniques for bridges and civil structures is an invaluable reference for civil engineers involved in safety inspection, maintenance and repair of bridges and buildings.

Language, Identity and Cycling in the New Media Age 2021 This book examines how identities associated with cycling are evoked, narrated and negotiated in a media context dominated by digital environments. Arguing that technology is being impacted by the changing nature of the material and semiotic resources available for making meaning, the author introduces an approach to exploring such identity positioning through the interrelated frameworks of Functional Linguistics and Multimodal Analysis, and illustrates how this happens in practice. The book is divided into three parts, each of which focuses on a different aspect of identity and media environment. Part I considers the use of cycling in conventional media of print and television. Part II investigates community and leisure / sporting identity through an online cycling forum, while Part III examines corporate identity realised through corporate websites, consumer channels. This unique volume will appeal to students and scholars of discourse analysis, applied linguistics and the world of cycling.

The Office of the Assistant Chief of Staff (Installation Management) Housing Division has overall responsibility for transition and has selected Norfolk District, Center of Standardization for Family Housing to facilitate and coordinate participation in the LEED for Homes Pilot Program. A team consisting of Army personnel experienced in Army (AFH) and/or sustainability conducted site visits to AFH at Fort Lee, VA and Fort Huachuca, AZ. Both installations have a history of successful AFH projects and current projects under construction that used SPIRIT as a sustainability tool. LEED for Homes was applied to each AFH project. Further, each credit was evaluated for applicability to Army projects and its ease of application using current design guidelines. Where appropriate, feedback was provided to AFH project teams, concerns, or clarifications on particular credits. The team also defined several Innovation and Design credits that could universally apply to AFH projects.

Readings in Human-Computer Interaction01 2020 The effectiveness of the user-computer interface has become increasingly important as computer systems have become useful tools for persons not trained in computer science. The user-computer interface is often the most important factor in the success or failure of any computer system. Dealing with the numerous subtly interrelated issues and technical, behavioral, and aesthetic considerations consumes a large amount of development time and a corresponding percentage of the total code for any given application. A revision of one of the most successful books on human-computer interaction, this compilation gives students, researchers, and practitioners a comprehensive and up-to-date guide to the field and a comprehensive guide to the research literature. Like the first edition, this book combines reprints of key research papers and case studies with synthesizing survey material. It is significantly reorganized, updated, and enhanced; over 90% of the papers are new. An invaluable resource for systems designers, cognitive scientists, computer scientists, managers, and anyone concerned with the design of computer interfaces, it is also designed for use as a primary or supplementary text for graduate and advanced undergraduate courses in human-computer interaction and interface design.
