Leistungs- und Lastbedarfssteuerung Dec 14 2020 Die Bedeutung der leistungsgebundenen Energieträger nimmt in der Energieversorgung weiterhin zu. Damit müssen die Bemühungen um eine möglichst hohe Auslastung von Erzeugungs-, Transport- und Verteilungsanlagen noch verstärkt werden. Hohe Ausnutzungsdauern sind allein schon aus wirtschaftlichen Gründen zwingendes Gebot. Sie sind auch bei Einbindung regenerativer Energiequellen anzustreben, um die Umweltbelastung dadurch zu mindern, daß man mit möglichst geringen installierten Leistungen auf der gesamten Kette von der Energiegewinnung bis zur Energieanwendung den Endenergiebedarf sicher und preisgünstig deckt. Während auf der letzten VDE/VDI/GfPE-Tagung 1987 Techniken zentraler und dezentraler Energieversorgung im Vordergrund standen, beleuchtet die diesjährige Tagung die Probleme der Spitzenbelastung und des Lastausgleiches aus der Sicht der Abnehmer und der Energieerzeuger mit konventionellen und regenerativen Umwandlungsanlagen. Dabei werden die technischen und tariflichen Möglichkeiten einer Leistungs- bzw. Lastbedarfssteuerung durch Versorger und Verbraucher aufgezeigt.

Biotransformations in Organic Chemistry Aug 29 2019 The use of biocatalysts, employed either as isolated enzymes or whole microbial cells, offers a remarkable arsenal of highly selective transformations for state-of-the-art synthetic organic chemistry. Over the last two decades, this methodology has become an indispensable tool for asymmetric synthesis, not only at the academic level, but also on an industrial scale. This well-established textbook on biocatalysis provides a basis for undergraduate and graduate courses in modern organic chemistry, as well as a condensed introduction into this field. After a basic introduction into the use of biocatalysts—principles of stereoselective transformations, enzyme properties and kinetics—the different types of reactions are explained according to the 'reaction principle', such as hydrolysis, reduction, oxidation, C–C bond formation, etc. Special techniques, such as the use of enzymes in organic solvents, immobilization techniques and modified or artificial enzymes, are treated in a separate section. A final chapter deals with the basic rules for the safe and practical handling of biocatalysts. In this completely revised 6th edition, emphasis has been given to an improved didactic style including colored graphics in order to facilitate a deeper understanding of the underlying principles. New developments, such as transamination, enzyme promiscuity and applications on industrial scale within the field of 'white biotechnology' are included.
